Teknofibra® Heat Shield

Short Description

Teknofibra® Heat Shield

Description

Teknofibra® shield is a versatile, lightweight material which is both heat reflecting and heat absorbing. This heatshielding material provides a thermal barrier which has not been seen before in the automotive business. These sheets can be used to protect cold parts in close proximity of heat emitters or even open flames. This particular sheet is a rigid aluminium sheet which can be used close to extreme heat sources such as turbos and catalysts.
